New Landscape Strategy Lessens Water Consumption

By Corrine Ferré
ValleyCrest Certified Arborist

Together, ValleyCrest and the Ocean Reef Community have opted to replace many existing Impatiens beds with Pentas, in order to lessen water consumption while maintaining the Reef’s colorful landscape.

Impatiens and Pentas have different water requirements. In South Florida, Impatiens are truly considered annuals and need frequent and abundant watering to look their best.

Pentas, which are referred to as a “woody” bedding plant, require much less watering to look their best. Pentas are also perennials, which do not need to be replaced as often. Although the Pentas are more expensive to install, because of the water consumption factor, ValleyCrest and the Ocean Reef Community judged them as a better color choice plant for the winter months, when precipitations are scarce and humidity is much lower than in summer months.

In addition, many new and exciting hybrids have been developed over the last few years, which feature striking flowers. By the same token, these hybrids are more resistant to disease, require less fertilization and are easier to maintain than their earlier counterparts.

Winter Work Schedule to Begin

The winter season Front Gate hours for contractors and maintenance workers begins Monday, Nov. 2. Work will be permitted Monday – Friday from 8 a.m. – 5 p.m. (however contractors may begin entering the community at 7:30 a.m. in order to get to their work sites and prepare for the day’s work; they must depart the community by 5:30 p.m.). No work is permitted on Saturday or Sunday. Requests for emergency repairs must be made by the homeowner to the Front Gate and clearance obtained from ORCA, the Public Safety Director or the supervisor on duty.

Ocean Reef Generosity Aids Wild Bird Center

By Kristen Burnie
Director of Communications

A recent donation from an Ocean Reef Club member, coupled with an Ocean Reef Foundation grant, has helped a local refuge for wild birds to stay afloat through difficult economic times.

Since 1984, the Florida Keys Wild Bird Center, located on Key Largo’s bayside, has been a healing place for injured wild birds. The center’s primary objective is help wild birds recuperate before releasing them back into the wild; however, birds that are unable to recover can also find permanent refuge at the center.

Early this fall, the center fell upon an economic crisis. As its monthly, donation-driven income dropped from $35,000 in August to just $9,200 in September and $3,200 in the first half of October. With unceasing bird food and medicine bills, the center was on the brink of being forced to shut down.

In such an event, Federal law would have required that the birds be adopted out to other shelters or euthanized.

Bruce Horn, the Center’s Executive Director, said that up until last week, the outlook for the center’s survival was dismal.

“We knew we wouldn’t make it through October,” Horn said. “We knew the wells would start running dry and we’d have to start placing as many birds as we could.”

That was until Ocean Reef Club donor Bob Gintel offered to provide a matching grant of up to $10,000 for donations made to the center through the Ocean Reef Foundation. Within days, the match had been met and a $20,000 donation was made.

“The Ocean Reef response to the crisis at the Bird Center is a great example of your Ocean Reef Foundation at work. When one of our concerned donors learned of this need, he offered $10,000 from his own Donor Advised Fund held at the Foundation, if it could be matched by others,” said Foundation Board Member Rich Miller. “The Foundation itself was able to quickly respond with a $5,000 small urgent response grant from a recently created fund, which was developed to handle emergencies during this tough economic climate. Just as soon as we made some other Reef donors, who had expressed an interest in being informed of urgent needs in this area, aware of the matching offer, we had the total match and a check for $20,000 was on its way in just a few days. A case of your Foundation and several generous Ocean Reefers ‘giving where they live’. ”

While the donation, which will be used to pay for bird food and medications, has alleviated the immediate financial crisis, the problem has not been entirely solved. Instead, the grant has given the center time to develop a stronger operational and financial plan.

“With the generosity of Ocean Reef and Bob Gintel, I think we have enough money to get to the season and continue to operate,” said former Bird Center board member Havey Zielger. “Once we get things stabilized and are not in emergency mode, we are going to restructure and move into the future on a stable basis.”

Ziegler said that fundraising efforts are also being made throughout the community of Key Largo and elsewhere in the Upper Keys.
